Brooklyn, NY

Full-stack software engineer with 20 years of technical leadership in film, TV and commercial production, **optimizing mission-critical systems at scale**. Fluent in **agentic engineering workflows**, designing multi-agent systems, directing LLM code generation and **maintaining full architectural ownership** of the output.

TECHNICAL SKILLS

Languages & Frameworks: *TypeScript, Python, React, Next.js, Astro, Node.js, HTML, CSS, SQL*

Infrastructure & Systems: *AI Integration, Cloud infrastructure (GCS, AWS), PostgreSQL (Drizzle ORM), MongoDB (Mongoose), Supabase, Express, Hono, CI/CD (Vercel, Render, GitHub Actions), API Design & Integration, Git, Vitest, Jest, NodeTest, Playwright, real-time systems architecture, event scheduling, distributed systems*

Product & Design: *Figma, Framer, Adobe Creative Suite, rapid prototyping, user-centered design*

PROFESSIONAL EXPERIENCE

AI Engineer at Plan Monster — NY, NY | *August 2026*

- Built a **conversational admin dashboard** for a job site assistant, contractors and designers message over WhatsApp, iMessage and SMS. Admins ask things like “what’s our token usage this month?” or “show me agent runs that failed” and an LLM maps the request to validated backend queries and renders UI inline.

Full Stack Engineer at HJBL Trading ([Deployed Link](#)) — NY, NY | *April 2026*

- Established a **production-ready web presence** for a proprietary trading firm, including **full rebrand and CMS**, by executing an **end-to-end design to deployment workflow within a 3 week sprint**.

Full Stack Engineer at Phillips Corp. — NY, NY | *December 2025 - January 2026*

- Accelerated product development by **shipping a full-stack MVP in a 2 week sprint**, architecting backend APIs and data structures that unified a legacy LMS system with new feature prototypes.
- Eliminated manual enrollment workflows by **engineering a drag-and-drop Program Builder**, applying frontend state management patterns to transform a fragmented process into a unified digital experience.

Post Production Manager at VOX Media Productions — NY, NY | *April 2019 - September 2019*

- Led an Emmy-winning team under pressure:** Architected a digital asset management system reducing operational latency by 10%. **Managed cross-functional teams** through complex production cycles, owned final deliverables to client specification and shipped on deadline.

Post Production Consultant at EA Productions (Founder) — NY, NY | *September 2017 - Present*

Clients: Beyoncé, Spotify, Squarespace, VICE, ESPN, Beyoncé, Uncommon Creative Studio, Rock Paper Scissors

- Embedded across production pipelines as the technical lead and creative advisor between producers, clients, ad agencies and editors.
- Diagnosed workflow bottlenecks across distributed media systems and **implemented process and tooling improvements**.
- Invested in team growth: **Designed, documented and taught workflow processes to direct reports**, building institutional knowledge and enabling independent execution.

SELECTED PROJECTS

Agentic Knowledge Worker App for Yaklabs ([Deployed Link](#)) — *Project | September 2026*

- Built an **agentic desktop app prototype in a week** for a design engineering interview, **mirroring the company’s architecture** (split daemon and gateway) and **adding a drift-detection CLI & web app** that checks visual diffs, design tokens and accessibility, where only a human can approve new UI baselines. Designed around their **core principle of making agent work legible to non-technical people**.

“Docs 2 Slides” App for Graphic Designer ([Deployed Link](#)) — *Project | August 2026*

- Built a SPA that **moves marketing copy from long Google Docs into the matching slides of large Google Slides decks**, so designers can skip the copy-pasting and focus on design.

EDUCATION

Full Stack Engineer Fellow at Fractal Tech AI Accelerator — NY, NY | *October 2025 - December 2025*

800+ hrs of full stack engineering across 12+ projects. Built & shipped production-ready AI tools including custom agent systems and API pipelines. Mentored by senior engineers from Google, Netflix and Stripe.

Custom Claude Agent Dashboard ([Github Repo Link](#))

- Operated multi-agent Claude Code workflows identifying a need for observability:** Designed and built a custom dashboard modeling agent task execution, sub-agent dependencies, and tool call events across a **backend REST API pipeline**.

Roland TR-808 Drum Sequencer ([Deployed Link](#))

- Real-time systems architecture applied to audio:** Architected a **high-precision web audio sequencer** using Tone.js, React and Supabase implementing custom **event scheduling and transport synchronization**. Identified Web Audio API as the master clock and React as a UI follower, decoupling transport logic from render cycles to ensure frame-accurate playback.

Savannah College of Art & Design — *Savannah, Ga | Bachelor of Fine Arts*

Major: Film & Television Production, Minor: Animation
